DETAILED ACTION

Allowable Subject Matter

1. Claims 7-12 are allowed. The following is an examiner's statement of reasons for allowance:

One form of a network configuration is a ring-structured layer 2 Ethernet network. A Spanning Tree Protocol is known as a network configuration protocol. The STP is a protocol for logically making a tree-structured network, so as not to produce a loop structure in a layer 2 network. It is usually employed as a method for ring switchover in the event of a failure by which a time of 50 seconds is normally required for a system reconfiguration. This impedes to maintain a session of an application.

The object of the present invention is to provide in a ring structured layer 2 network a method for shorting a switchover time in the even of a failure. A substantial search of the field of invention failed to provide any prior art of record that discloses, teaches, and/or fairly suggests

"updating the path information in the address learning table is performed by exchanging address information related to system modification between the arbitrary layer 2 switch and the layer 2 switch belonging to the other group by use of a system switchover frame"

as substantially described in the independent claims of the instant application. Therefore, the claimed invention is patentable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2416

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

a) Allan et al. (US 20080259784), Failure Notification in a Network Having Serially Connected Nodes

b) Finn (US 20050249123), System and Method for Detecting Link Failures

c) Gonda (US 7394758), Method for Supporting SDH/SONET APS on Ethernet
